Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Group I, claim(s) 1-4, drawn to DNA polynucleotides, class 536 subclass 23.1, for example.

II. Group II, claim(s) 5, 6, 7,8, 9, and 10, drawn to recombinant RNA viruses, class 435 subclass 235.1, for example.

III. Group III, claim 11, drawn to a method of producing bovine lysozyme using a recombinant RNA virus, class 800 subclass 288, for example.

IV. Group IV, claim(s) 12-32, drawn to compositions containing lysozyme, class 424 subclass 49, for example.

2. Inventions I, II and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, they have different modes of operation, different functions, or different effects. In the instant case the different inventions are nucleic acids, which are biochemical polymers; viruses, which are biological organisms composed of protein and nucleic acids, and compositions, which are heterogeneous mixtures of components.

3. Groups Inventions III and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process

Art Unit: 1638

(MPEP § 806.05(f)). In the instant case process as claimed can be used to make other and materially different product, that of making transgenic plants which are reservoirs for heterologous DNA.

4. Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product, the recombinant RNA viruses can be used as a source of viral proteins.

5. Inventions IV and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process of using that product, the lysozyme be used as a pure biochemical compound, used as a reagent.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art, and the literature and sequence searches required for each of the Groups are not required for another of the Groups, restriction for examination purposes as indicated is proper.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
